

Keep nature in Park Hills...plant a tree now!

Over the past few years, Park Hills has lost many large trees to disease and development. These trees need to be replaced and added to so our tree canopy thrives.

Trees offer many benefits such as removing air pollution, supporting other natural species (an example of which is our exciting owl family), and enhancing property values.

Maintain existing trees –

Do **NOT** let ivy grow on trees. Remove existing ivy. Ivy can kill a tree (www.treestewards.org).

Do **NOT** top trees. An arborist can advise proper cutting that will maintain tree health.

Plant new trees –

Plant diverse species of trees. We have seen how the Emerald Ash Borer has depleted a large part of our tree canopy.

Do **NOT** plant Callery pear trees. It is now considered an invasive tree species that will crowd out native trees.

Take advantage of the Park Hills Tree Program!

An owl family lives high in the tall trees between Morgan Court and Cleveland Avenue in Park Hills
